Land-Use Management to Support Sustainable Settlements in South Africa Verna Nel, Stuart Denoon-Stevens, 2023-10-06

This book provides a theoretical and practical foundation needed to change the practice of land use management in Southern Africa. It presents an overview of alternative land use management system for South African municipalities that is economically, socially and environmentally more sustainable than many of the land use schemes in effect at present. Land use management is a component of spatial governance that controls the nature and extent of development to prevent harmful impacts on people and the environment. As the current system with its colonial/modernist planning and regulatory mechanisms were never designed to deal with rapid change, urbanisation and informality, a different form of land development and land use management is necessary. This timely book reflects the culmination of many years of practical experience and research into various aspects of land use management by the authors and studies undertaken by their master's and doctoral students. The book goes beyond an analysis of the problems and suggests concrete proposals that can be applied throughout Southern Africa based on a rural to urban transect. This book is directed to a broad range of readers interested in spatial planning and land use management. It will be of interest to those in the fields of geography, urban studies, urban design, planning and architecture.

Conflicting Agents Cathérine Tessier, Laurent Chaudron, Heinz-Jürgen Müller, 2006-04-11 Conflicts between agents acting in a multi-agent environment arise for different reasons, involve different concepts, and are dealt with in different ways, depending on the kind of agents and on the domain where they are considered. Agents may have conflicting beliefs, conflicting goals, or may have to share limited resources. Consequently, conflicts may be expressed as mere differences, or as contradictions, or even as social conflicts. They may be avoided, solved, kept, or even created deliberately. Conflicting Agents studies conflicts in the context of multi-agent systems, i.e. artificial societies modeled on the basis of autonomous,

interacting agents. This book addresses questions about types of conflicts, conflict definitions and the use of conflicts as trigger functions for activities in multi-agent systems. The book is also dedicated to questions of conflict management, resolution and avoidance, i.e. the question of how agents cope with conflicts and conflicting situations.

Tactical Logistics Made Easy LTC James H. Henderson, USA (Ret.),2015-03-11 This book is designed to provide the reader with a “back to the basics” look at tactical logistics, focusing on a more formal and detailed understanding of proper field and staff procedures, processes, relationships, and development that encompass the before, during, and after combat operations. So sit back and enjoy for I’ve done all the long and exhausting research for you and placed all the pertinent information in one book rather than multiple documents. The book is written with a series of lessons formatted in a fashion that offers the reader a doctrinal concept in developing a tactical standing operating procedure (TACSOP) and its components, but with a logistical flavor providing detailed instructions to standardize a complicated routine and recurring field and staff procedures that can enhance the overall logistical functions and capability of every mission.
